TAG330

Electronic HV no-voltage tester, from 50 to 765 kV

STANDARD:
IEC 61243-1

USE:
Device designed to test for the absence of voltage on HV systems up to 765 kV. Its use is particularly recommended for voltages over 400 kV.

TECHNICAL SPECIFICATIONS:
- Mains frequency range: 16.66; 50 or 60 Hz, please specify when ordering.
- Indication of the absence of voltage and the correct operation of the device by a green LED.
- Very sturdy polycarbonate casing.
- Self-test device.
- Electronic cut-out if battery drops under threshold voltage of 8V.
- Can be used in all weathers.
- Temperature range: from -25°C to 50°C
- Power supply: one 9V alkaline battery.

Device comes in a metal case with hooks Ø 60 and 120 mm and straight electrode 100 mm.

ADVANTAGES:
Devices features an electronic detection system with miniature gas discharge tubes.

This original configuration gives it very high performances, especially in the case of high induction and/or parasitic electric fields.

TABLE LEGEND:
Other settings available with a ratio of 173 up to 735 kV.
