The KV30-40D high voltage test set is a general purpose test instrument designed for testing insulation systems and the measurement of breakdown voltage on electrical plant and components.

**Features**
- 0-30kV output voltage
- Other voltages available to order
- Automatic mains voltage selection
- Key operated supply switch to prevent unauthorised operation
- Dual overload protection
- Variable electronic trip - 10-110% of rated output
- Voltage and current metering
- Zero-volt interlock
- External 24Vdc interlock circuit
- Visual indication of test piece failure

The unit is supplied in a compact, portable case with a permanently connected 2 metre long HV output lead.

The KV30-40D is one of a family of 1200VA high voltage units spanning the range 6kV 200mA to 30kV 40mA. Most of the units in the range are supplied with analogue metering.

### Features

<td>0.1mA</td>
</tr>
</tbody>
</table>

The output voltage is variable up to 30kV. A zero-voltage interlock is provided, ensuring that the output may only be energised with the voltage control at zero. The output voltage and current are metered by large true rms reading digital meters.

The unit features automatic mains voltage selection and an external 24Vdc interlock circuit for connection of emergency-off switches and interlock switches on the test enclosure.

The test object and output are protected by an adjustable electronic current trip. The trip level may be set to 10-110% of the rated output in 10% steps. Breakdown of the test object is visibly indicated and the unit must be manually reset after a trip condition before testing can be resumed.

**KV30-40D Specification**

**Supply Requirements**
115V/230V±10% auto-selecting
50/60Hz 1ph 1200VA max

**Output**
The output of the KV30-40D is supplied via a permanently connected partially screened high voltage cable. This stows in the lid for transit along with the ES30 earthing stick.

The output of the KV30-40D is rated at 40mA on a duty cycle of 5 minutes on/15 minutes off or 20mA continuously. These ratings are based on an ambient temperature of 25°C.

**Metering**
The output voltage and current are metered by large, accurate true RMS digital meters. The meters are backlit and have a digit height of 19mm.

<td>0.1mA</td>
<td>±1% rdg±4d</td>
</tr>
</tbody>
</table>

**Overload Protection**
Two overload protection circuits are provided on the units. The first is user selectable, and allows trip currents between 10% and 110% of the rated output to be set. A trip condition is indicated by an illuminated push button and an audible alarm. The second trip circuit is a magnetic circuit breaker operating on the primary of the HV transformer. This operates on large overloads (such as flashovers).

**Protection and Safety**
In addition to the output protection the input and control supplies are protected by fuses.

All units are designed to meet the requirements of BS EN61010.

An earth terminal is provided on the transformer which must be connected to a low impedance local earth.

**Temperature Range**
Storage -20°C to 60°C  Operating 0°C to 45°C

**Dimensions**
300x400x470mm  Weight 42kg

**Accessories supplied with unit**
Supply lead, spare fuse set, operating manual, 5m earth lead, ES30 earthing stick.

**Special Products**
If you require a different output voltage test system, please contact us with your specification and we will quote for a custom design.
